**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morishita et al. U.S. Patent 5,968,175 [Morishita], and in further view of Ginter et al. U.S. Patent 5,910,987 [Ginter]

3. As per claims 1 and 5:

4. Morishita discloses:

a program storing section for storing a first program for controlling basic operations of said electronic apparatus, and a second program that is accessed in said first program so as to control an additional operation of said electronic apparatus; a control section for implementing a desired operation by executing only said first program, or both said first and second programs; Col. 4, lines 25-37.

a system managing section that, that renders the additional operation implementable, makes said second program accessible in said first program. Col. 7, lines 5-20.

Morishita discloses the claimed invention except for the a system managing section that, response to a releasing key operation. Ginter teaches that it is known in the art to provide a releasing key operation. Col. 46-47, lines 1-67. It would have been obvious to one having ordinary skill in the art at the time the invention was made to

provide the software use method control system of Morishita with the releasing key operation of Ginter , in order to provide the control and security required to insure proper protocol is followed to receive the remuneration assigned to the use of the software program.

As per claims 2, 6, 10, and 16:

Morishita further disclose:

wherein said releasing key is produced using at least information peculiar to said apparatus. Col. 69, lines 30-40.

As per claims 3, 7, 11, and 17:

Morishita further discloses:

said electronic apparatus is connected with a managing side via a wide-area network; and the managing side carries out the releasing key operation by remote control. Fig. 8.

As per claims 4, 8, 14, and 20:

Morishita further discloses:

said program storing section stores a plurality of second programs; and with respect to a certain combination of said second programs, said system managing section renders said second programs implementable by only one releasing-key operation. Col. 14, lines 12-67

As per claims 9 and 15:

Morishita discloses:

a program storing section for storing a first program for controlling basic operations of said electronic apparatus, and a second program that is accessible in said first program and controls an additional operation of said electronic apparatus; Fig. 14.

a control section for implementing a desired operation by executing only said first program, or both said first and second programs; Fig. 9

Morishita discloses the claimed invention except for the a system managing section that, in response to a releasing key operation, makes said second program accessible by said first program, said management system comprising a key issuing section on a managing side, said key issuing section issuing said releasing key upon confirming that a predetermined procedure has been conducted by a user side.

Ginter teaches that it is known in the art to provide a system managing section that, in response to a releasing key operation, makes said second program accessible by said first program, said management system comprising a key issuing section on a managing side, said key issuing section issuing said releasing key upon confirming that a predetermined procedure has been conducted by a user side. Col. 53-56, lines 1-67.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the software use method control system of Morishita with the system managing section that, in response to a releasing key operation, makes said second program accessible by said first program, said management system

Art Unit: 3621

comprising a key issuing section on a managing side, said key issuing section issuing said releasing key upon confirming that a predetermined procedure has been conducted by a user side of Ginter, in order to provide the control and security required to insure proper protocol is followed to use the software program.

As per claims 12 and 18:

Morishita further discloses:

wherein, on said managing side, said key issuing section issues said releasing key in response to entrance into a use contract or payment of a use fee. Col. 32, lines 1-37.

As per claims 13 and 19:

Morishita further discloses:

wherein history information relating to say said managing side manages issuance of a releasing key. Col. 33, lines 1-45.
